08 Emergency, LBR, survivability

08 Emergency, LBR, survivability

Pro tips

• Dynamic emergency calling walks trusted IP, network site, subnet, and civic address. A VPN pool is often not a dispatchable location.

• On Direct Routing you choose whether the SBC or Microsoft routes the emergency call. Say which hop you configured.

• A Survivable Branch Appliance keeps a limited set of calls up when the path to Microsoft 365 fails. It does not replace the SBC.

Interview traps

• Placing a real emergency call to test a lab. Use the matcher and a test policy.

• Treating location-based routing and emergency location as the same feature. They share sites and do different jobs.

Cheat sheet

Trusted IP → site → subnet → civic address

Emergency route: Microsoft or your SBC, on purpose

LBR: selected PSTN stays on the local gateway

SBA: some branch calling during a WAN loss

SBA scope is smaller than normal Teams Phone

Facts in the long lessons were checked 14 October 2026. This sheet is a memory aid.
