11 TLS, certificates, SIP

Pro tips
? Use TLS 1.2 or higher, a public CA, and a SAN that matches the SBC FQDN. A name mismatch stops the handshake before INVITE.
? OPTIONS from the Teams proxies should receive 200 OK. Missed OPTIONS take the trunk out of service.
? AMR-WB is not offered when media bypass is on. The rest of the codec list is a negotiation, not a wish.

Interview traps
? Arguing about the dial plan while the certificate is still issued to the old hostname.
? Trusting a private CA for Direct Routing. The trunk wants a public certificate.

Cheat sheet
ClientHello -> certificate -> SAN matches FQDN -> Finished
OPTIONS -> 200 OK
INVITE / 100 / 180 / 200 / ACK
RTP follows the SDP: processor or bypass
TCP 5061, not 5060

Facts in the long lessons were checked 14 October 2026. This sheet is a memory aid.
