Troubleshooting tree

Sources: Call Analytics, Call Quality Dashboard, Direct Routing plan.
Accessed 14 October 2026.

No dial tone
  License or voice routing policy missing, or the user is in the wrong tenant.
SIP fails before OPTIONS
  Certificate name, private CA, or TLS version. 5061 never opens.
OPTIONS misses
  Trunk out of service. Failover only if the route lists the next gateway.
Connects, silence
  Media ports or a bypass path that the network blocks.
One user sounds bad
  Call Analytics, not a CQD building case.
Whole subnet looks bad
  CQD. Check loss, jitter, RTT, and whether DSCP survived.
VPN
  Full tunnel hides the site and often strips the mark.
Both sides transform numbers
  Pick one normalization owner before the next cutover.
