15 ACS, Speech, Copilot

Pro tips
? Call Automation is a server-side call: answer, play, recognize, transfer, hang up. Recognize can be DTMF or speech.
? Copilot Studio can sit in the recognize step. A transfer to a person is part of the design.
? Foundry is where you evaluate a model. It is not a second phone system.

Interview traps
? Shipping a bot with no human escape and calling it a contact center.
? Assuming speech recognition sees media on a path you never forked.

Cheat sheet
Answer -> Play -> Recognize -> Transfer or Hang up
Recognize DTMF or speech
Escape a queue or a person, on every flow
ACS events are the call
Teams policy is not the bot runtime

Facts in the long lessons were checked 14 October 2026. This sheet is a memory aid.
