07 Attendants and queues

07 Attendants and queues

Pro tips

• Assign the phone number to the resource account, and assign the resource account to the auto attendant or call queue.

• Overflow and timeout need a destination you have already built. A queue that overflows to itself loops.

• Attendant routing, serial, round robin, and conference mode are different. Name the one you configured.

Interview traps

• Licensing the agents and forgetting the resource account.

• Pointing a menu key at a queue that does not exist yet.

Cheat sheet

Resource account → license → voice app → number

Attendant: hours, holidays, menu

Menu key → person, queue, or another attendant

Queue: agents, presence, method, overflow, timeout

Outbound from the app needs its own calling funding

Facts in the long lessons were checked 14 October 2026. This sheet is a memory aid.
